

Object tips in python.

[Contents](#) [Previous](#) [Next](#)

Goal: Learn some python tricks for objects.

- "_" represents last object returned.
- Python objects are always instance of something, to check the class type:

```
print object.__class__
```

- Quering object type:

```
if isinstance(a, (int, float, str, list, tuple))
```

- Most objects/functions are self documented, get help by typeing:

```
print obj.__doc__
```
